FOR EVERY TURN

It's been more than a century since Rossignol transformed an idea into reality in a little workshop in Voiron, France. And while we've been around a long time, we're still in the same business we were back then: **making turns**. But now we make **turns on skis**, on boards, on bikes, and in running shoes. We **turn to get down mountains** and we **turn to get up them**. We **turn on street corners** and we **turn on trails**. But most of all we **turn into better versions of ourselves** the more we come together outside. That's why, over a hundred years later, Rossignol is far more than just a ski company. We're a head-to-toe, multi-sport brand, here to turn wisdom into innovation, ideas into action, and the mountains into an invitation. We're here to empower anyone and everyone who wants to live life up high.

For every turn, there's Rossignol.

RESPECT

ENVIRONMENTALLY-FRIENDLY PRODUCTION PROCESSES

Social and environmental responsibility is a focal part of the Rossignol Group's commitment

Rossignol officially launched its Respect programme in January 2020, which formally sets out all the Group's actions and commitments to protect its playground, i.e. the mountains. The Group is focused on achieving three major objectives, namely reducing its carbon footprint by 30% by 2030 (a target endorsed by official organisation SBTi, the Science Based Targets initiative), lowering its waste by 40% by 2025 and taking action to encourage harmonious living.

The Group has taken a number of steps to develop increasingly eco-friendly products:

SKIS

- Developing products that have less impact by encouraging the use of recycled materials for the edges, sheet metal and base, which can contain up to 85% recycled materials depending on the model.

- For the 25-26 range, our estimate is:
 - GREEN ENERGY: 98%
 - PEFC WOOD: 65%
 - BIO-SOURCED RESIN: 16%

ALPINE SKI BOOTS

- We recover, grind and reinject injection sprues for the production of ski boot shells. For 2023/2024 season, 40,000 pairs will contain these recycled materials.

For example the shell of the COMP J4 black is made of 50% recycled materials.

HELMETS AND GOGGLES

- We have generalised the use of a new material that is more respectful of the environment. Its manufacture requires no VOCs (Volatile Organic Compounds), CFCs (Chlorofluorocarbons) or other compounds known to be particularly harmful to the environment.
- The Essential goggles contain 64% of recycled material*.
- The Essential helmet contains 48% of recycled material*.

**Calculation based of recycled material weight compared to product weight without packaging.*

STANDARD USED

PEFC LABEL

The PEFC label guarantees that the certified wood is monitored all the way from the forest and throughout the processing and marketing chain, ultimately resulting in certification for the finished product.

- Certification can only be claimed and displayed if:
- * The wood is sourced from a certified forest
 - * The wood processing chain is certified
 - * The production plant is also certified

BIO-BASED EPOXY RESIN - CERTIFIED ISCC

This is an epoxy resin made from renewable raw materials, such as plant or animal components, rather than fossil resources. The ISCC certification ensures that the production meets strict environmental and social sustainability criteria. The mass balance method allows tracking and certifying the proportion of bio-based raw materials in the final product, even if they are mixed with conventional raw materials during the production process.

This approach ensures traceability and transparency throughout the supply chain, thus promoting a transition to more sustainable materials.

RECYCLED RAW MATERIAL

This term refers to materials recovered from waste that, after undergoing a recycling process, can be reintroduced into production cycles as a full or partial substitute for virgin raw materials. These materials helps to reduce the consumption of natural resources and energy, thereby contributing to environmental sustainability.

Recycled raw materials can originate from various sources, including industrial waste, end-of-life products, and production scraps. They play a pivotal role in the circular economy by converting waste into valuable resources.

GREEN ELECTRICITY

All the Group's production sites, as well as our head office in Saint-Jean-de-Moirans and our logistics hub in Saint-Etienne-de-Saint-Geoirs, run on 100% renewable electricity.

In addition, several of the Group's sites have fitted photovoltaic panels to produce solar-generated electricity to meet their energy needs.

INTERNATIONAL STANDARD - ISO 14001

All our production plants are certified to the international ISO 14001 standard, which is based on continually improving environmental performance at certified sites.

WOMEN

SKI CONCEPTION

At Rossignol, for over 100 years, technology has been at the heart of how we make skis. While they look simple on the outside, we've learned an awful lot over the last century about how to tweak the inside and make skis stand apart. Deep R&D is core to who we are, and is one of the biggest benefits you get when you choose Rossignol. As of this year, there are four key transversal technologies now forming the bedrock of our performance.

Each has its own application, but at least one of these cutting-edge technologies is now backing any Rossignol experience you sign up for.

4 ROCKERS

FULL CAMBER
Race power control

TIP ROCKER
Hard snow precision

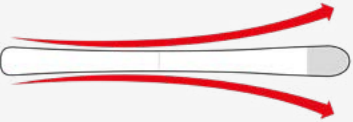

TIP & TAIL ROCKER
Versatility, adaptability

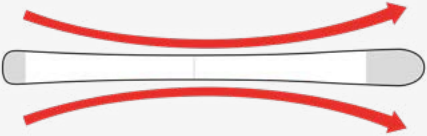

TWIN ROCKER
Smear & grip

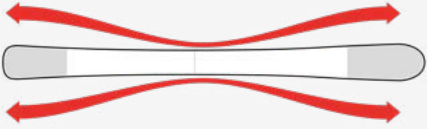

3 SIDECUTS

OVERSIZED SIDECUT
Carving power

EXTENDED SIDECUT
Fluid, evolutive carving

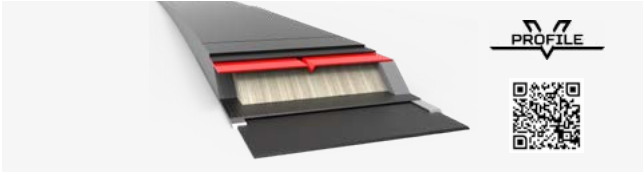

PROGRESSIVE SIDECUT
Playfull fluidity

4 KEY TECHNOLOGIES

V-PROFILE

DYNAMIC FLEX AND GRIP IMPROVEMENT

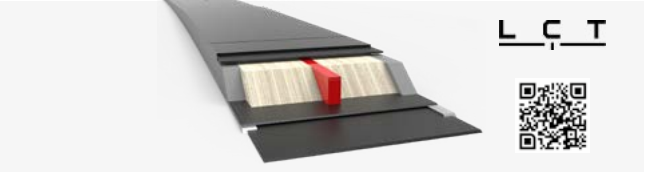

V-Profile isolates the layered components of the ski core to allow fine tuning of the flex pattern, optimizing grip and precision in every kind of turn.

LCT

PERFECT STABILITY AND FULL CARVE PRECISION

Line Control Technology (LCT) adds a central power rail to the middle of the wood core to eliminate counter-bending, allowing you to direct the ski's energy towards steering, no matter the condition.

VAS

VIBRATIONS ABSORPTION AND CONFIDENT CONTROL

Vibration Absorber System (VAS) dampens chatter for smooth snow contact, delivering confidence and control in all variable snow conditions.

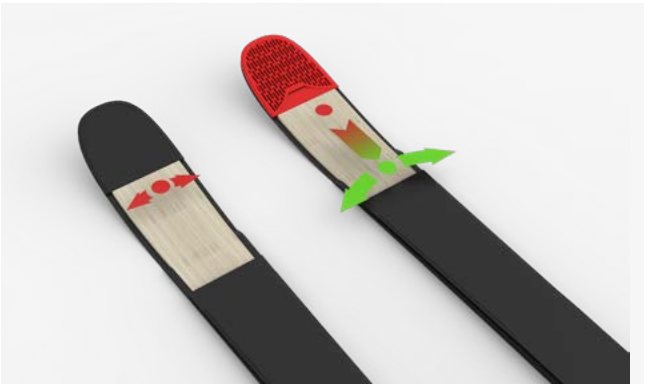

AIR TIP

INCREASE FLOTATION, EFFORTLESS MANEUVERABILITY

Air Tip reduces swing weight at the ski's extremity, making it more maneuverable and playful, while maintaining a strong platform under foot.

ARCADE

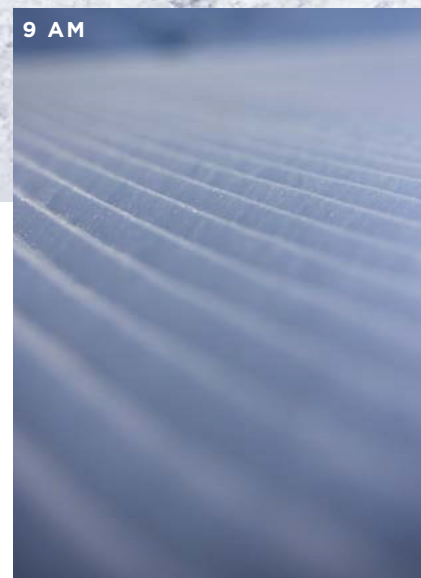

100% EVERY TURN

ARCADE, ALL MOUNTAIN REBORN.

Skiing is full of different styles, different terrain, and most importantly, different tastes. Arcade is a one-ski quiver, opening every kind of terrain to every kind of skier. From groomers to chopped pow, moguls to crud, chalk to chunder, Arcade offers a smooth ride that never holds you back and keeps the team together.

9 AM

12 PM

4 PM

OUR PLAYGROUND IS DIVERSE

Our terrain is diverse & always changing. We never know what kind of snow to expect. Snow conditions are evolving, from 9 am to 4 pm, from December to April, season after season.

THE CONCEPT

THE NEW ARCADE SKI, THE FUSION BETWEEN:

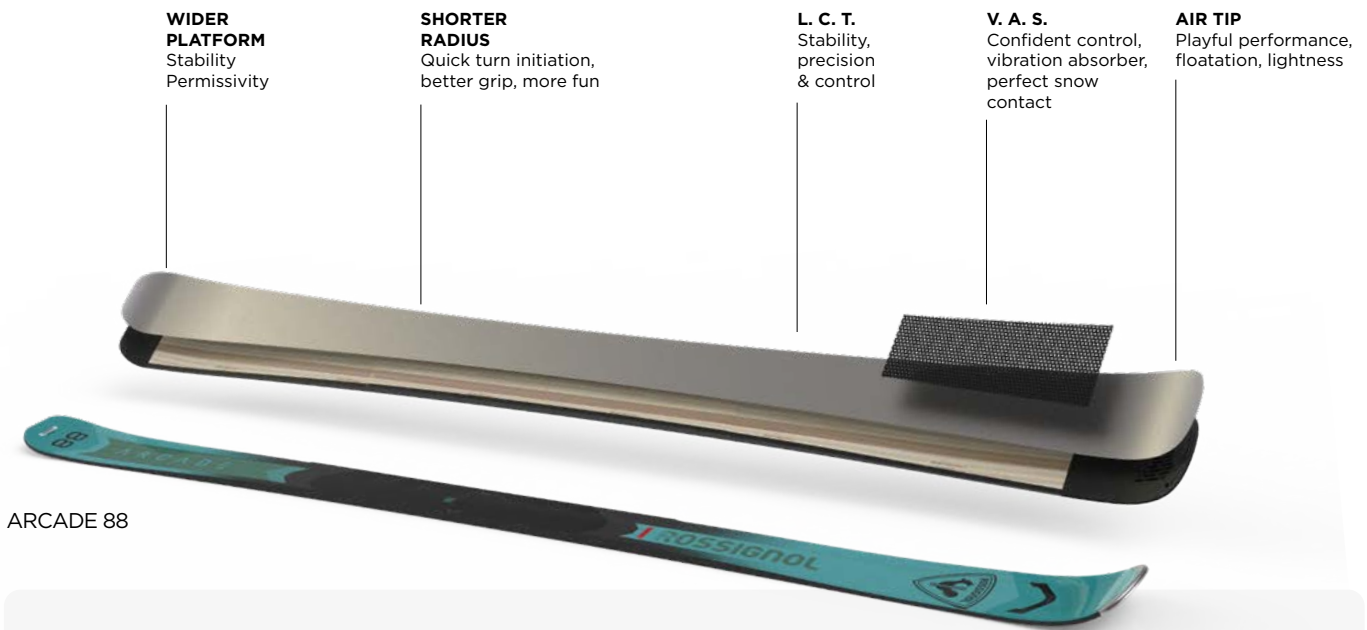

A SHORTER RADIUS
ON A WIDER PLATFORM:

- > STABILITY
- > PERMISSIVITY
- > QUICK TURN INITIATION
- > BETTER GRIP
- > MORE FUN

MADE FOR THE SNOW YOU WILL FIND
VS THE SNOW YOU ARE EXPECTING TO FIND.

A BLEND OF OUR MOST
ADVANCED TECHNOLOGIES

NEW

BIO SOURCED RESIN

FACTORY CERTIFIED GREEN ENERGY

MADE AND SOURCED IN EUROPE

WOOD CORE EXCEPT ARCADE 84
PEFC CERTIFIED

L.C.T.

Vibration Absorption System. Inside technology, visible from the outside. The Visco material increases the sheering effect of the ski and **absorbs vibrations** for **higher comfort and control**.

V.A.S.

Line Control Technology. It eliminates counter-flexing for **fluid stability in all conditions** and it brings confidence, stability and full control. The new L.C.T wood reduces the ski carbon footprint with a PEFC certified wood.

AIR TIP

AIR TIP technology reduces weight at the extremities and concentrates ski mass underfoot, freeing the tips and tails for effortless maneuverability, **natural flotation and playful control**.

ESCAPER

EARN YOUR TURN

MANEUVRABILITY

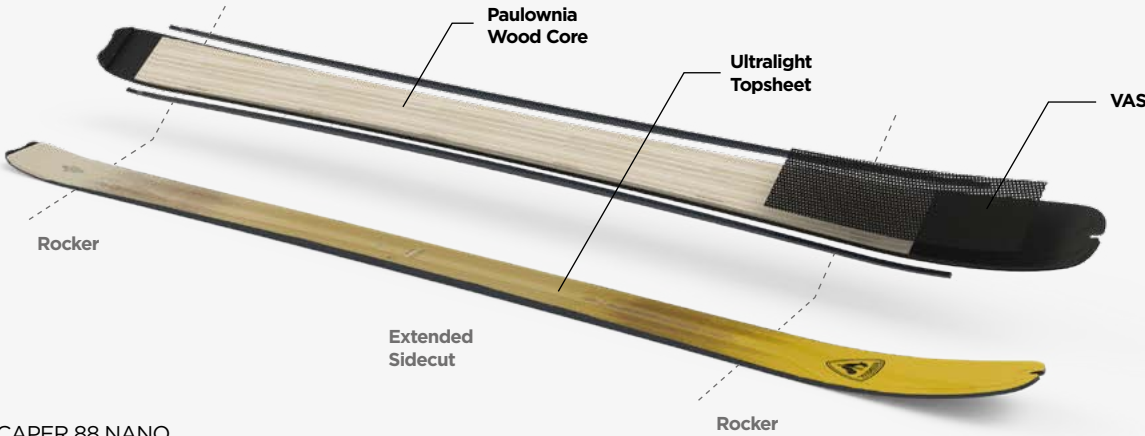

Ultimate lightness with no compromise on downhill.

It could be a morning before work or an evening at sunset, guided simply by the light of a head torch. A night in a mountain hut or a van. A day trip on trails with just trainers or skis on your feet. An invitation to discover new horizons.

- Dedicated tip for skin anchor

SKINS

COMPOSITION

100% NYLON

Lightweight, a thin design and long life span. Still with quality standards, the 100% Nylon skin opens the door to backcountry exploration.

MIX (70% MOHAIR / 30% NYLON)

The classic skin mix, now lighter and with a thinner design. The skin for all enthusiastic skiers.

EVER DRY 3.0

EVER DRY 3.0 represents a step forward for the environment: it is the first fluorine-free treatment for skins.

GRIP

Good grip on ascents is very important. A combination of materials and fibre attachment systems make skins very stable in all conditions and throughout their entire life span.

SSL

Thinner layers make the SAFER SKI LIGHT (SSL) membrane 12% lighter, i.e. 150g/m2. SSL reduces the weight of a pair of skins by around 60 to 75g while maintaining 100% watertightness.

ESSENTIAL

BE THE CHANGE, BE *essential*

Essential, the result of a collaborative effort...

Designers, material engineers, production technicians and recycling specialists work tirelessly, hand in hand, to achieve ambitious goals and meet the challenges of design, manufacturing and marketing. From this collaborative, the Essential ski was born, a unique new Rossignol model, ecodesigned with its complete life cycle developed in a circular economy.

... Which brings together all our communities in our global and open vision of outdoor activities

Because with Essential ski we have the power to act, we invite all mountain lovers to get more involved at their own level. Because when everyone contributes with their means, and cooperation is the rule, then everything becomes possible!

ECO-CONCEPTION

Recycled, Certified & Bio sourced materials represent 73% of the ski.

34%
Recycled materials

39%
Bio Sourced materials
32,7% of which is beech wood from responsible forests

The ski is recyclable at 77%, 7 times more than a traditional ski.

35% ALUMINIUM
Recycled in organized facilities, aluminum is infinitely recyclable today.

35% WOOD
Wood chips are reused in various construction materials. We are actively working on solutions that will allow these to be reused in future Rossignol skis.

7% STEEL
Recycled in organized facilities, steel is infinitely recyclable today.

12% PLASTIC
Sorted, recovered, and repurposed as a source of energy. We work actively with the recycling sector.

5% FINE WOOD
Sorted, recovered, and repurposed as a source of energy. We work actively with the recycling sector.

6% WASTE
Throughout the different stages of grinding and sorting ski materials, only 6% goes towards waste.

JUNIORS

NEW SEGMENTATION

Check out our new range segment specifically for children, which is designed to bring greater clarity while adapting to every age of skier. Whether discovering their first downhill thrills or perfecting their technique, our range paves the way for unforgettable adventures on the snow.

KID RANGE - 70-92 CM

A dedicated range for young skiers discovering the enjoyable sensations of snow sports, with skis between 70 and 92 cm.

JUNIOR RANGE - 100-150 CM

A range for all children who want to take their skiing skills to the next level, with three different models between 100 and 150 cm.

PRO RANGE - 110-180 CM

A collection offering greater variety for teenagers, with a wide choice of sizes and styles.

SKIBOOTS

The 25-26 skiboot collection is still placed under the sign of innovation, with the arrival of **STEP IN technology**, introduced on Vizion in 24/25, on the brand new ALLTRACK range, spearhead of the Rossignol skiboot collection.

The ALLTRACK range is widely deploying STEP IN technology to improve the consumer experience with a very rich offer.

- **Double positioning:** Freeride with Low tech Insert and ALL Mountain
- **Retail/rental** - Men and Women
- **3 lasts:** 98 mm - 100 mm - 102 mm
- **4 buckles** and **BOA®** (in 102 mm)

ALLTRACK

STEP IN, TURN IT ON,
RIDE EVERYWHERE

STEP IN TECHNOLOGY

How can we elevate the experience for skiers when using their ski boots while streamlining the purchasing process?

These questions were the driving force behind the development of VIZION and naturally ALLTRACK. All skiers are looking to make their life easier when slipping on their ski boots, so we have come up with the solution.

The **STEP IN technology** in the ALLTRACK range is key to broadening the target market to encompass freeride and All Mountain skiers, with boots featuring more of an all-terrain feel with a real bonus when it comes to both the walking and entry positions, all of which guarantees high levels of skiability.

Rossignol's proprietary STEP IN technology is backed by six patents. Both ranges are equipped with the STEP IN technology, and the similarities and differences relate to the mechanism.

ALLTRACK / VIZION: WHAT'S COMMON?

1 SHELL STRUCTURE + BI-INJECTED SPOILER

The shell is modelled on a traditional overlap structure and is wide open at the rear to ensure easy foot entry. An articulated spoiler recreates the last of a traditional four-buckle boot.

The spoiler is bi-injected with a:

- Highly rigid material in the centre to provide solid rear support
- Soft material along the sides to mould to the shape of the shell and offer a snug foot wrap.

2 STEEL SPINE PATENT PENDING

This rugged, articulated steel spine reinforces the action of the spoiler and acts as an anchor point for the cuff release mechanism. This anchor is located at the top of the spine.

- Highly solid rear support
- Powerful flex
- More energy.

3 STEP IN LINER FULL CUSTOM PATENT PENDING

A traditional liner construction with the ability to follow the cuff when it tilts towards the rear.

- Elasticated areas to allow the liner to follow the cuff. - patent pending
- The liner can easily be removed and refitted

The fit is the same as a four-buckle boot, with excellent heel support, and can be fully personalised using the Configuration machine.

A small elasticated component at the back of the liner secures the cuff to the liner for easy foot entry. Patent pending.

ALLTRACK / VIZION: WHAT'S DIFFERENT

VIZION DOUBLE BUCKLE PATENT PENDING

This double buckle provides two independent functions:

- Unlock the cuff through a cable with its inner section
- Traditional closure with the upper section.

When the release buckle is opened, the cuff unlocks. When closing, the cuff returns to the ski position after flexing.

- Very intuitive and easy to use
- Automatic
- The cuff can be adjusted without having to switch over to foot entry mode.

ALLTRACK MECHANISM ENTRY/WALK

The mechanism at the back allows skiers to obtain the different positions:

WALKING POSITION:

Open the buckles on the cuff - pull the mechanism upwards - you are in the walking position.

ENTRY POSITION:

Open the buckles - pull the mechanism upwards - the cuff tilts backwards - slip the boot on - close the buckles - simply flex towards the front to put the boot in the ski position.

SKI POSITION:

All the buckles must be closed - simply flex to put the boot in the ski position.

HERO

TURN INTO A HERO

A new design and shape for the WORLD CUP Z SERIES and HERO WORLD CUP ranges. The HERO World Cup boot harnesses all the experience of top-level competition and is technologically close to the Z Series.

ENGINEERED FOR RACING

Designing a new Race boot is always a tremendous challenge, so athletes play a leading role in the development process. Thanks to Cyprien Sarrazin, two-time Kitzbühel winner, the new Race boot has tasted the joys of World Cup victory. Our other athletes, Loic Meillard, Petra Vlhova and Alexander Steen Olsen, have also put the brand's colours in the spotlight with their podium finishes.

PETRA **VLHOVA** (SVK)

CYPRIEN **SARRAZIN** (SVK)

LOÏC **MEILLARD** (SUI)

ALEXANDER **STEEN-OLSEN** (NOR)

OUR ATHLETES AT WORK

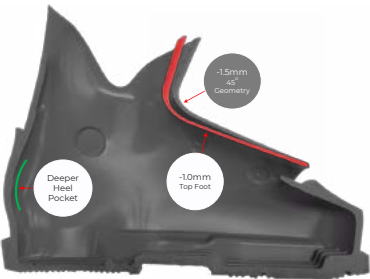

We make a point of involving our athletes when working on the boot's look to ensure that the graphic design ticks all their boxes. We are keeping the grey colour as a symbol of performance, aggression, power and speed.

TECHNOLOGIES

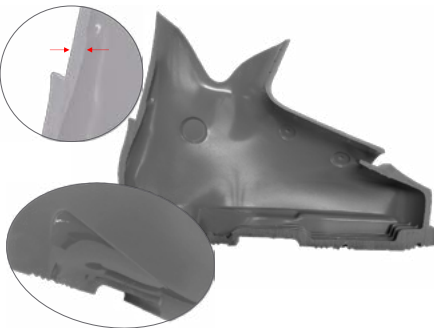

GEOMETRIC SHAPE

97 mm last:
- The internal last is closer to the foot at the instep. The angle is near 45° by moving back 1.5 mm, and lowering by 1 mm on the top of the foot
- The heel pocket is deeper to ensure better support
- The sole length is reduced by 3 mm to 303 mm (for size 26.5).
This improves precision, power transfer and foot interaction.

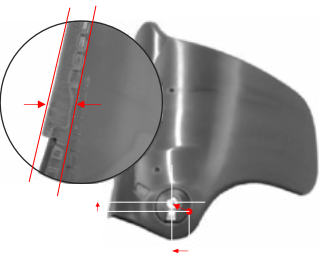

SHELL STRUCTURE

The walls of the shell are thicker to bring them closer to those of the Z Series.
The lower part of the shell has been strengthened, and the new design delivers greater torsional rigidity.

CUFF STRUCTURE

The top of the cuff has been redesigned with thicker walls. The axis of rotation is the same as the Z Series.
The rear area has been reinforced to increase rear support and enhance the rebound.

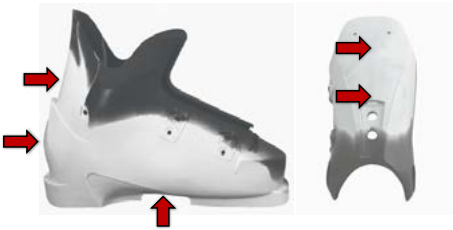

POWER FLEX INSERT

This insert creates a strong link between the shell and cuff in this hinge area for improved power transfer.
Two options are available for adjusting the flex according to the skier's morphology and proficiency level, or the temperature and snow conditions.
- Carbon insert (pre-mounted): extremely hard
- 53 SHD PU insert (in the box): soft.

DUAL CORE RACE

The entire HERO WORLD CUP and HERO range features the DUAL CORE technology.
The process involves three injection points on the shell and two on the cuff. This technology can be used to accurately finetune the progressive flex, rear support and rebound.
It also allows for highly effective lateral power transfer.

CANTING RACE

The canting is the same as for the Z series.
- External canting (pre-mounted): 0.5°
- External canting (in the box): 1°
- Fixed internal canting.

LIFTER VIBRAM

OPTIONAL - for making the HERO boots more comfortable to walk in - 3 mm Vibram

HI-SPEED

The HI-SPEED piste range comes in three internal lasts of 98, 100 and 102 mm. Configuration is the key concept for ensuring that these boots are perfectly tailored to each skier, whether for supercharging performance and/or improving comfort.

All the black models incorporate between 20% and 30% recycled plastic materials, depending on whether it is the shell or cuff.

TECHNOLOGIES

STRUCTURE

GENERATIVE DESIGN

The generative design saves weight by optimising the thickness of the plastic and is mainly located under the buckles to prevent the shell from deforming during closure. This design helps produce the right weight, which varies according to the type of boot.

JUNIOR CELLULAR DESIGN

The boot design is intended to be close to the foot, with thin layers to save weight. The HERO J4 model weighs 1,090 g (1/2 pair). It also allows excellent progressive flexion, which is essential for good skiability.

INTERNAL LASTS

Internal lasts:

92 mm	100 mm MV
92+ mm	102 mm HV
98 mm LV	104 mm HV+

SENSOR MATRIX (104mm)

The design of all 104 mm boots is structured to wrap the foot more effectively and give the boot an original personality.

BOA®

The BOA® Fit System featuring H+i1 is specifically designed for the demands of Alpine skiing, providing a micro-adjustable, multi-directional, precision fit that uniformly wraps the foot, reducing pressure points while delivering superior heel hold and edge-to-edge control.

DUAL CORE

DUAL CORE involves injecting materials with different hardness levels or of different types into the same mould. The result is a sandwich construction with an ultra-thin layer of hard materials on the outside encapsulating the softer materials inside. This makes it possible to create zones of different hardness on the boot, without adding layers of plastic.

This technology can be used to accurately fine-tune the progressive flex, rear support and rebound.

DUAL CORE RACE

All the HERO WORLD CUP and HERO ranges are equipped with the DUAL CORE technology. The process involves injecting materials at three injection points in the shell and two injection points in the cuff. This technology can be used to accurately fine-tune the progressive flex, rear support and rebound. It also allows for highly effective lateral power transfer.

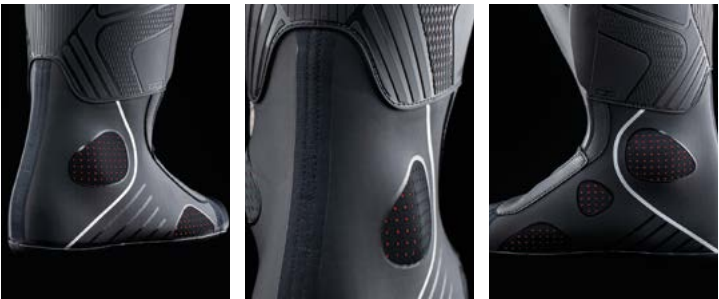

DUAL CORE HI-SPEED/ALLTRACK/VIZION

The DUAL CORE technology works in synergy with the Generative Design. It reduces weight while retaining rigidity. This is key to ensuring a high level of skiability. On the HI SPEED, ALLTRACK and VIZION boots, the Dual Core technology is used on the lower part of the shell, which reinforces torsional rigidity.

LINER

LINER 5 ZONES

PRE-SHAPED FULL CUSTOM

The liner is entirely thermoformable (external stem/padding and tongue) What makes it different is a special construction that allows a high level of thermoforming in the ankle bone, metatarsal (1st and 5th) and navicular zones to mould perfectly to the shape of the foot - while the rest of the stem retains its properties for perfect support. This ensures excellent support and therefore very high technical properties.

FULL CUSTOM LINER

FULL CUSTOM LINER

For improved precision and performance, these liners are fully customisable to mould perfectly to the shape of the foot. The internal padding, external stem and tongue are all customisable. Customisation is carried out using the new thermoforming machine - True Form Moulding Unit - using heated covers for greater effectiveness on the stem - with the Alpine programme. - 8 mn.

CUSTOM LINER

CUSTOM LINER

Only the internal padding of these liners can be customised.

PRE-SHAPED LINER

The liners are pre-shaped around the ankle bones for greater comfort and support.

SEAMLESS TOE BOX

To increase the efficiency of the thermal insulation - we have designed a liner with a toe box that retains heat inside the liner. Thermographic studies show that this new design has reduced energy wastage by around 20%.

THERMAL INSULATION

THINSULATE® STRETCH

Used mainly in clothing, this extremely fine fibre improves freedom of movement thanks to its elasticity. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability.

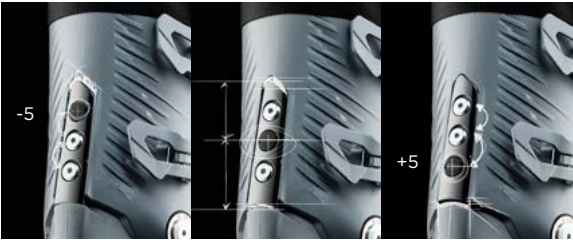

WINTHERM®

Wintherm proved to be an especially effective thermal insulator in our laboratory tests. Positioned at the forefoot, it comprises a sheet of micro-perforated aluminium that allows air to circulate and a polar fleece material to guarantee warmth and comfort.

CONFIGURATION

Configuration is a key asset for these new boots - all the settings combined with CUSTOMISATION of the liner allow you to offer customers a real benefit in terms of both comfort and performance.

PERSONALIZATION

CANTING

Adjustment of the lateral angle of the cuff by +/- 1° to adapt to the shape of the lower leg.

CATCHES

The catches on the cuff can be adjusted to 3 positions to increase or reduce space for the calves.

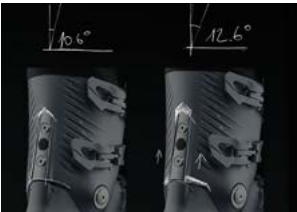

FLEX ADJUSTMENT

The boot's flex can be adjusted up or down by changing the position of the screws on the back of the cuff. Central position - the flex shown on the boot. Moving the screws as pictured in the diagram allows you to adjust the flex by 5 points (+/-).

FORWARD LEAN ADJUSTMENT

This setting allows you to adjust the forward lean of the boot to make it more aggressive. In standard position - when the boot comes out of the box - the spoiler is in the low position and the angle is 10.6°. Adjusting the spoiler to the upper position creates a 6 mm forward lean and a 6 mm height gain, for a forward lean angle of 12.6°.

CUSTOMISATION

TRUE FORM MOLDING MACHINE

The customisation machine has been developed by the Rossignol R&D teams to optimise the customisation of the new HI-SPEED and PURE boots. It consists of 2 tubes that propel hot air into the liner. Optionally, heated covers can be used for complete customisation by heating the stem of the liner.

HEATED-COVER KIT

HEATED COVERS

PROCESS

This involves shaping the liner to the skier's foot. We have developed a new thermoforming machine - the TRUE FORM MOLDING UNIT - which allows highly precise thermoforming. This machine has an arm that blows air at a temperature of 80° to thermoform the padding and tongue. But the biggest innovation is the use of heated covers - inspired by the motor racing world - to thermoform the external material of the liner for a perfect result.

1. FULL CUSTOMISATION - HOT AIR + HEATED COVERS

Ultimate customisation.

- Place the liners under the arm.
- Close the sleeve.
- Wrap the liner in the heated cover.
- Press "Alpine".
- Heat the 2 elements for 8 minutes (automatic timer).
- Leave the liners for 2 minutes and then put them back in the shells.
- Put the boot back on the customer's foot. Tighten it slightly and leave it on for 10 minutes with the buckles closed.

2. CUSTOMISATION

Liners in the shell or outside the shell if you prefer.

- Place the boots under the arms.
- Pull up the sleeve and fasten it below the buckle on the cuff.
- Press "Alpine".
- Heat for 8 minutes (automatic timer).
- Leave for 2 minutes before putting it on the customer's foot.
- Tighten it slightly and leave it on for 10 minutes with the buckles closed.

3. QUICK FIT

Comfort heating - Quick heating inside the liner.

- Liners in the shell
- Place the boots under the arms.
 - Press "Pre Heat".
 - Heat for 2 minutes (automatic timer).
 - Ready for a quality test.

ROSSIGNOL WOMEN

The history of skiing is full of legendary women who've defied norms, set unparalleled records, and inspired everyday skiers around the world. Rossignol has long stood at the heart of these stories, as a brand innately entwined with the spirit and success of female skiing. Tessa Worley, Federica Brignone and Petra Vhlova are just a few of the icons that alongside Rossignol, changed the face and history of skiing.

Our skis have been a steadfast partner to female leaders for over a century, offering reliability in every glide and turn, drawing on a deep technical understanding of their needs to ensure our equipment is intuitive and natural, mirroring the skier's intentions with unparalleled predictability and precision.

THE WOMEN PRODUCTS TEAM

The women collections are developed by a women team. They know perfectly the women needs and how to communicate to the final consumer.

Every pair of skis, every boot, tailored specifically to the needs and desires of women around the world allows them to tap into their greatest potential, to perform at their best, and bring moments of joy both on and off-hill.

OUR MANTRA

When you introduce Rossignol women's equipment, you're offering more than just a singular product. You're sharing a legacy, a story of champions, and proposing the unconditional confidence we can deliver as a brand that respects and uplifts the aspirations of every female skier.

We attach especial importance to **the fit, the technicity, the graphism, the materials, the colors**. We reassure women with the **good words, to create confidence and desire**.

ARCADE WOMEN

100% EVERY TURN

ALL MOUNTAIN REBORN

The new Arcade Women ski is specially designed for passionate women skiers looking for versatility and performance on all types of terrain.

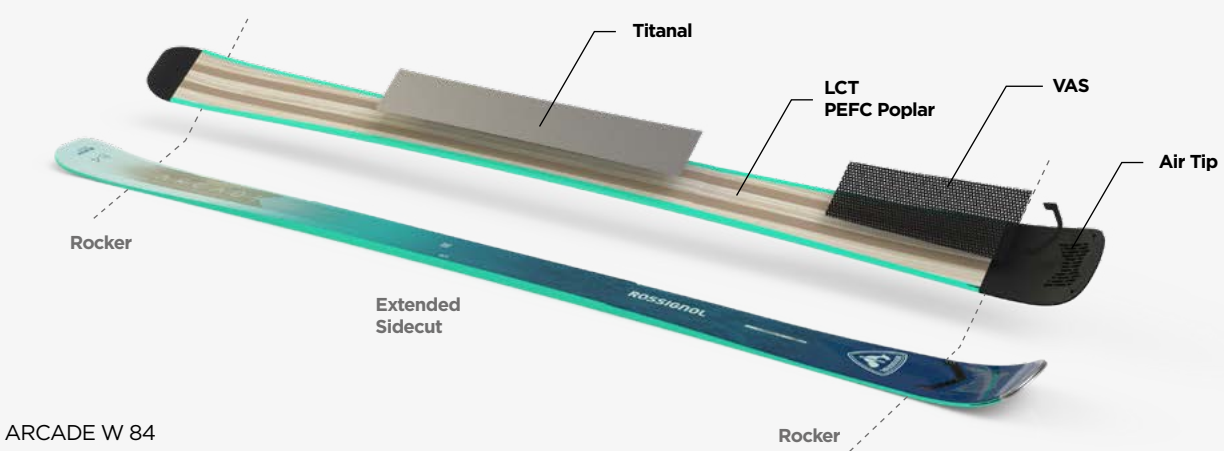

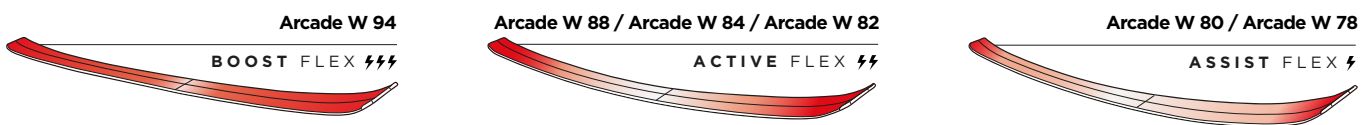

Combining the best Rossignol technologies, but also an innovative concept with a wider platform and a short radius, this ski will allow you to enjoy every turn, and in all types of snow.

Arcade Women offers you exceptional stability, effortless handling, responsiveness and unmatched sliding pleasure, to ski with confidence on all types of snow.

NOVA

TURN CONFIDENTLY

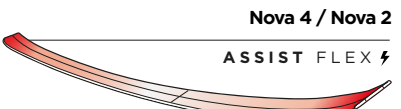

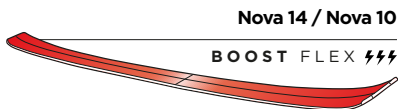

HIGH PERFORMANCE CARVING SKI

Women skiers embody femininity and style, but they are also determined and daring skier. Nova is as intuitive and subtle as they are...until they step on the gas.

Sometimes they lack self-confidence, so when it comes to ski, they need to be sure that they will be safe, with a ski that grips, is stable and tolerant for them to fully let go. Rely on NOVA to let them carve confidently and to reveal the best skier they can be.

WOMEN SKIBOOTS

The Rossignol Women philosophy permeates the construction of our ranges and products.

- A unique range organisation designed and developed for women.
- No technical jargon, just simple words that everyone can understand. We focus on the benefits.
- We are guided by what appeals to women, such as thermal insulation.
- We take great care over the designs and finishes, and the choice of materials and colours to create products that leap off store shelves and catch women's attention. The aim is to build a special bond that inspires trust and desire!

ALLTRACK

STEP IN, TURN IT ON, RIDE EVERYWHERE

Introducing the STEP IN technology to the ALLTRACK range will make it easier for many women skiers to slip on their boots, meaning that they can enjoy everything that the mountains have to offer with no strings attached. An extensive and colourful range for the most demanding customers.

VIZION

TURN INTO THE FUTURE

A short range with a powerful visual impact - white/white collection. All the boots in the range feature the same colour, namely white, and the only difference is the colour of the double buckle and the rear part to highlight their function.

TECHNOLOGIES

1 STEP IN TECHNOLOGY

For a full technical explanation, refer to page 54-55.

2 DEDICATED WOMEN'S CUFF

The cuff on the Vizion boots is cut lower and tulip-profiled to suit the female body shape.

3 MERINO WOOL THERMAL INSULATION

The most thermally insulating material has been selected for the women's boots in the VIZION range.

See technical charts pages 80-83

PURE

The must-have range for women has been completely overhauled this season without losing any of its femininity or sports-oriented performance. The boots are available in three lasts (Skinny, Slim and Regular) with flex from 120 to 70 to meet the needs of all skiers, from the most demanding to the least technically proficient.

The Heat models have their own gold and silver identity.

HEAT MODELS

The **PURE PRO HEAT** model features a heating system that can be adjusted via Bluetooth using a Therm-ic® app - available to download free of charge using the attached link.

www.therm-ic.com/fr/content/13-application-thermicheat-control.

This app allows you to very easily adjust the temperature setting. Two modes can be used to manage the batteries.

- **ECO MODE** allows you to choose a heating period - for example: 4 minutes heating followed by 2 minutes off.

- **MOVEMENT MODE:** heating starts each time the skier stops.

USAGE TIPS

Using the batteries - The batteries must be charged before using for the first time.

1. Connect the USB cable. The charging indicator lights up and turns green. Then plug in the two connectors linked to each boot. The indicator turns red and charging begins.
2. When the batteries are fully charged, the charging indicator turns green. Charging stops automatically. The charging time is between four and six hours.
3. Unplug the two boot connectors from the USB cable.
4. Connector trap on the Boot Integrated System. During and after charging, the Boot Integrated System remains in the mode in which it was set before charging.

INSTRUCTIONS FOR USE

The heating system integrated in Thermic® ski liners has four modes: stop and levels 1, 2 and 3. These modes are indicated by the LED for the heating speed. The number of flashes of the LED indicates the selected heat setting. The integrated heating system can be adjusted to three different settings (level 1, level 2 and level 3) using the control panel.

If the LED indicating the heating level is not illuminated, this means the heating system integrated in the Therm-ic® ski liners is switched off.

SWITCHING ON:

Press and hold (for around 3 seconds) the function button to set the integrated system to the lowest heating level. Holding the button for more than 6 seconds will cause the liners will go into safety mode and switch off.

SETTINGS:

Press the function button once (for around a second) to increase the heat setting (level 1, level 2 or level 3).

- **Level 1:** one flash, low heat setting.
- **Level 2:** two flashes, medium heat setting.
- **Level 3:** constant illumination, high heat setting. If the system is in pause mode, you will first need to activate it.

PAUSE MODE:

If you do not press the button within 10 seconds, the system will switch to pause mode. Press the function button (for around a second) to activate the system, which will then switch back to the last selected heat setting.

SWITCHING OFF:

To switch off the system integrated in Therm-ic® ski liners, press and hold the button (for three seconds, until the heat setting LED is no longer illuminated).

INSTRUCTIONS FOR THE BLUETOOTH PAIRING SYSTEM

1. Enable Bluetooth on your phone and then open the Therm-ic® Heat Control app.
2. Connect the batteries: when the start screen appears, switch on your two batteries by pressing and holding each button. Continuous illumination of the red LED indicates that your batteries are switched on. Rapid flashing of the LED shows that Bluetooth is now enabled.
3. Add the batteries: click the “+” button in the middle to show your batteries in Bluetooth. Then click “add” to connect the two batteries to your phone.
4. Heat settings: the first screen allows you to adjust the heat setting for both batteries at the same time. You can increase or reduce the level of heat from 1 to 10. You can also switch off the heat temporarily by pressing pause.
5. Heat settings - individual: the second screen allows you to adjust the heat setting for each battery individually. By default, they are at the same level, but this option can be customised.

WOMEN 104 mm

The WOMEN's range - relax fit - has a very simple design for even greater efficiency. Three different technical offerings:

- Four-buckle tilting cuff: TRACK WOMEN
- Four buckles: a very lightweight boot with a fixed cuff: PURE COMFORT
- Three buckles: a highly accessible boot with three buckles: KELIA

CUSTOM LINER POLAR

LINERS TECHNOLOGY

All women's boots have liners that are specifically designed to suit the female body shape.

Women's liners are cut lower to accommodate differences in calf shape. They also have a more open shape for a more comfortable fit. The padding in the upper liner is very flexible to prevent any discomfort around the calf. The lining materials are very soft and comfortable, and are designed with a simple objective in mind: to make you want to put your foot in the boot.

HOW DO YOU CHOOSE YOUR FIT?

To make it easier to understand the different fits available, we have drawn our inspiration from the clothing industry and arranged our fits into four categories. The different fits have been designed to address various foot shapes and also deliver the level of support required, bearing in mind its direct influence on performance.

skinny fit

98 mm

An extremely narrow fit for women skiers in search of excellent support to ensure a high level of skiability. It is also the ideal fit for women with slender feet looking for excellent foot support.

Last 98 mm

slim fit

100 mm

A narrow fit for all proficient women skiers prioritising perfect foot support without any trade-off in comfort.

Last 100 mm

regular fit

102 mm

A classic fit that will satisfy a large number of women skiers wishing to strike the perfect balance between support and comfort.

Last 102 mm

relax fit

104 mm

A generous fit for all women skiers looking mainly for comfort, as well as for all those with fairly wide feet.

Last 104 mm

THERMAL INSULATION

Dedicated thermal insulation: since insulation is especially important in women's boots, all liners have passive thermal insulation based on the following materials: **MERINO** wool, **WINTHERM**® and **THINSULATE**® PLATINUM. Our laboratory-based thermal imaging studies show that these materials give our liners excellent thermal insulation.

THE LINERS HAVE EITHER:

1. TOTAL THERMAL INSULATION:

the insulator is all around the foot.

2. FOREFOOT THERMAL INSULATION:

the insulator is around the forefoot in the toe area.

MERINO WOOL

More than a thermal insulator, Merino wool is a natural thermal regulator. Its main qualities are: thermal control, soft feel, breathability, odour control and fast drying.

MERINO WOOL

WINTHERM

Wintherm proved to be an especially effective thermal insulator in our laboratory tests. Positioned at the forefoot, it comprises a sheet of micro-perforated aluminium that allows air to circulate and a polar fleece material to guarantee warmth and comfort.

WinTherm

THINSULATE® STRETCH

Used mainly in clothing, this extremely fine fibre improves freedom of movement thanks to its elasticity. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability.

3M Thinsulate INSULATION

SHELLS

Women's boots use the same shells as unisex boots which means that all features relating to the last, fit and performance are identical.

GENERATIVE DESIGN STRUCTURE + DUAL CORE

This specific design allows different thicknesses to be distributed according to the zones of the boot to obtain the right WEIGHT. On the PURE boots, the Generative Design is applied more softly on the cuff with thinner layers to respect the lower leg wrap. The associated DUAL CORE technology boosts the boots' performance.

CUFFS

The height of the cuff is significantly lower in comparison with a unisex cuff. The tulip-shaped rear section easily accommodates a woman's natural calf shape. It is less structured to take better account of female skiers' power.

PERSONNALISATION

Personalisation involves adjusting all possible 'mechanical' settings to tailor the boot to the skier's foot.

Adjustment of flex - canting, catches.

CUSTOMISATION

This involves shaping the liner to the skier's foot - using the Thermo True Form Moulding machine - for details of the process see page 78.

2 types of customisation:

FULL CUSTOM: stem, padding, tongue

CUSTOM: padding

LINER 5-ZONE FULL CUSTOM

The **PURE ELITE 120** model has a 5 ZONE FULL CUSTOM liner - with highly thermoformable ankle bone, metatarsal (1st and 5th) and navicular zones to mould perfectly to the shape of the foot - while the rest of the stem retains its properties for perfect support. This provides the assurance of excellent support and consequently very high technical performance.

SEAMLESS TOE BOX

To increase the thermal insulation, we have designed a liner with a toe box that retains heat inside the liner.

Thermographic studies show that this new design has reduced energy wastage by around 20%.

DOUBLE STRAP

This innovative and patented strap is very intuitive to handle. It makes the buckle easier to use by allowing you to close it with both hands - in a straight line. It is therefore extremely efficient and precise - with a very wide tightening range.

GOGGLES

TECHNOLOGIES

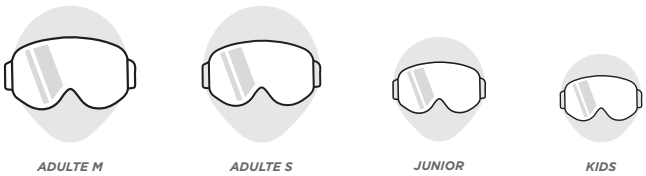

LENS TINT

The lens tint plays a crucial role in enhancing your vision and protecting your eyes in different light and weather conditions on the slopes. Each tint color serves a specific purpose, adapting to the environment by filtering and balancing the amount of light that reaches your eyes.

GOGGLES FIT

Selecting the right size ensures a secure fit, optimal comfort, and better vision on the slopes. A properly fitting goggle seals well around your face prevents wind, snow, and moisture from entering.

Our ski goggles are designed with sustainability in mind. The strap, frame, and goggle retainer are all made from 100% recycled materials, offering high performance while reducing environmental impact.

Relip

R-clip technology allows you to click in and out of your pole grips with the same ease as bindings, providing perfect hand positioning and a far more sturdy connection to the pole. Compatible with carbon shafts, the alpine grip is made from a single plastic so the grip can be recycled, the Nordic grip is made from cork with a redesigned strap that's more ergonomic than ever.
